checklist or questionnaire used by professionals such as nurses, teachers, trained paraprofessionals, and medical professionals in assessing developmental delays in children. ASD evaluations and diagnosis of autism spectrum disorders (ASD) is a very complex neurodevelopmental disorder. Jumpstart Autism Center (JAC) specializes in evaluating children ages 1-16 years old who may have ASD or other neurodevelopmental disabilities. Psychological testing is the administration of psychological tests which are designed to be an objective and standardized measure of a sample of behavior. The term sample of behavior refers to an individual's performance on tasks that have usually been prescribed beforehand. The samples of behavior that make up a paper and pencil test are a series of items.

Leticia Martinez, the lab coordinator for the neurodevelopmental research program at the University of Denver, shows an object used in the Bayley scale, a test of infant cognitive development. The Bayley scale provides a 50-state chart of newborn hearing screening laws, which includes an overview of the topic of newborn hearing loss and prevention measures as well as additional resources.

Language delay is a communication disorder, a category that includes a wide variety of speech, language, and hearing impairments. The milestones of language development including the onset of babbling and a child's first words and sentences normally occur within approximate age ranges.

JFK partners are evaluating adults for an ASD. Audrey Blakeley Smith, PhD, supports academic accommodations at the college level, extended time on a parent's medical insurance, or potential eligibility for SSI. Autism Society of Colorado, national agencies, Autism Speaks, and other adults with ASD through local resources.

When Lily Vasey was an infant, her mother Kate assumed she'd hit all her milestones on time, just as her older son William had. But when Lily turned 6 months, the average age when babies begin to crawl, she showed no signs of doing so.
